

CHAYANON KLANGARVUT

SOFTWARE TESTER & QA ANALYST

Cooperative Education

ABOUT ME

Mr. Chayanon Kklangarvut, I am interested in the Software Tester / Quality Assurance career because it is a job related to checking the correctness and quality of the system, which is an important part of creating efficient software.

I have a background in system analysis and understand the principles of software testing, such as writing Test Cases, manual testing, and reporting bugs systematically. I can also use basic tools such as Postman, Jira, and Excel to help manage testing tasks. I also intend to learn about Automation Testing, such as Selenium, and the basics of SQL to use in checking data in the system. I am ready to learn more about everything.
